How to configure ghost images

A ghost image is a simple way of adding additional security to your card design.

Usually, ghost images are a smaller reproduction of the card holder picture.

To configure a ghost image in ID Builder, please add an image to your design.

Select the image and click in the tab **Item** and set the item **Opacity** to half.

Some ghost images are also presented in grayscale.

To configure the color, with the image selected, click in the tab **Image** and mark the option **Grayscale**.
